

# Web Site an Internationalization tool. How to build a project web site.

Mr. Luca Galassi

Workshop:  
**Information Communication Technologies for IROs**

Rome, 15-16 November 2011

# How to build a website?

Many options.

The easy and more professional solution.

An Open Source CMS

# What is a CMS?

A CMS is a computer software system for organising and facilitating collaborative creation of documents and other content. A CMS is frequently a web application used for managing web sites and web content.

# What is “Joomla!”?

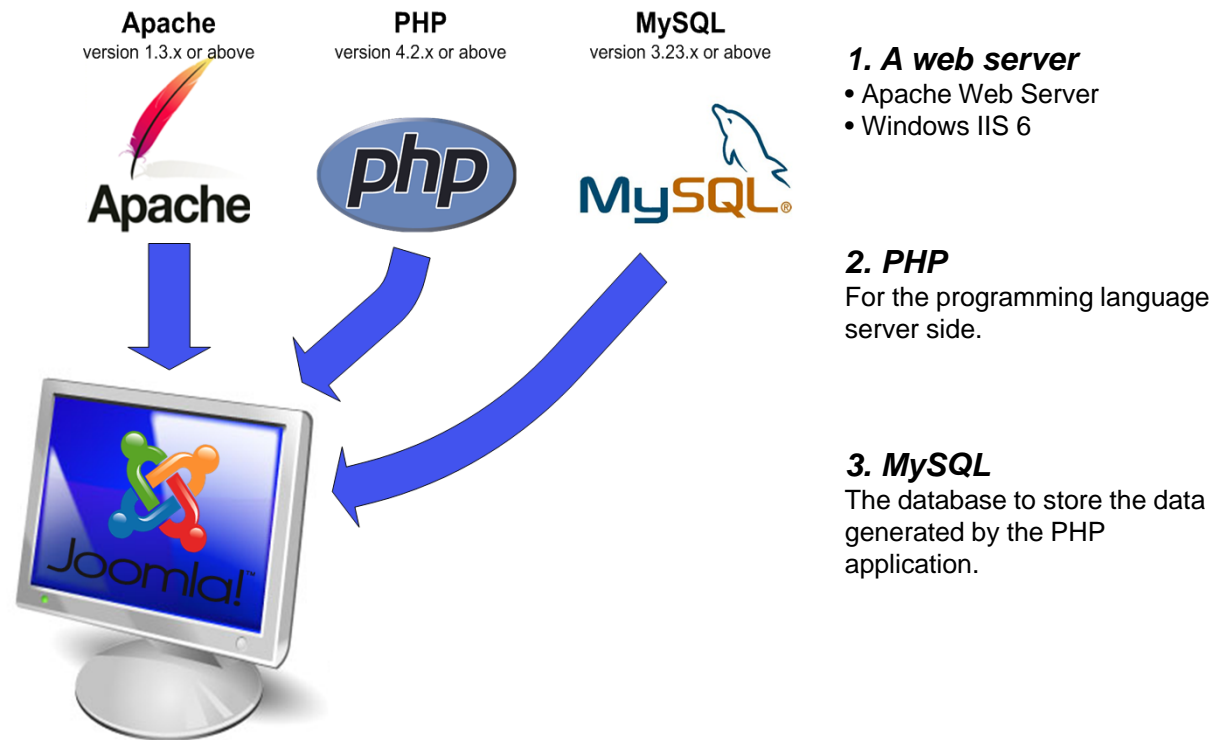

“Joomla!” is a free, open source Content Management System for publishing content on the world wide web and intranets.

Joomla! is possibly one of the biggest success stories in open source of late. Its first release came in only September 2005 and since then has grown to be one of the most downloaded Content Management Systems on the web.

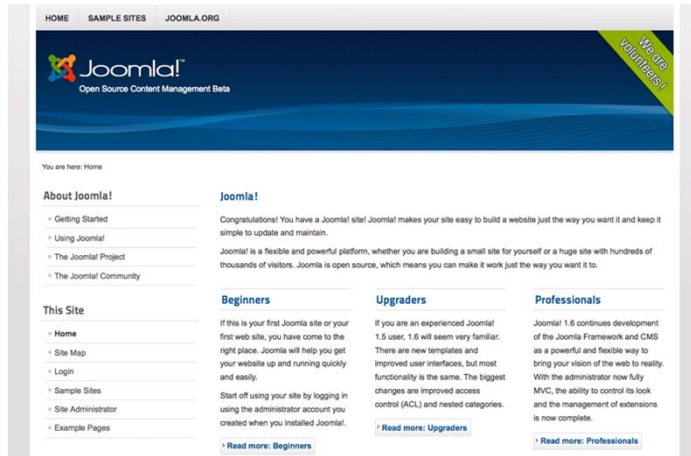

# Joomla! requirements

These are the minimum requirements needed before installing Joomla!

# Joomla! Structure

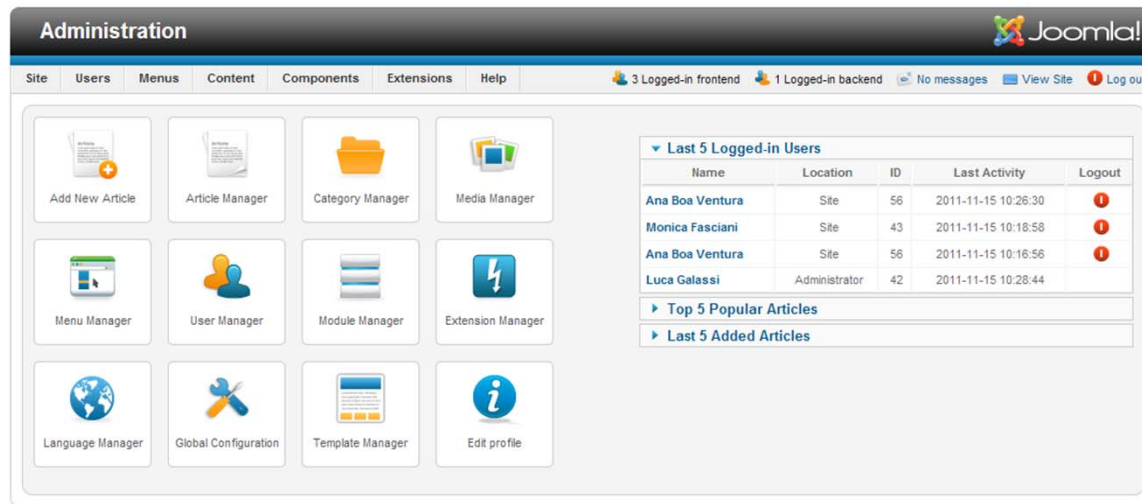

## FRONT END

- Modular structure;
- Customizable layout;
- Customizable template;
- Native SEO (Search Engine Optimization);
- Native multilingual site;

## BACK END

- Native creation of group of users (public part and private part);
- Easy contents management through Categories;
- Installation of external component and modules;

# Joomla! Example

Let's make an example!

# Thank you!
